OBJECTIVES

As an MCA student, I aim to strengthen my knowledge of software development, programming, and database management while gaining hands-on experience with modern technologies. I seek opportunities to apply my analytical and problem-solving skills in real projects and contribute effectively to organizational goals. I am committed to continuous learning and building a successful career in the IT and software industry.

EDUCATION

MASTERS OF COMPUTER APPLICATIONS (MCA) - CGPA - 6.8 IN 2025
ATRIA INSTITUTE OF TECHNOLOGY , BENGALURU

BACHELOR OF SCIENCE (BSC) - CGPA - 6.5 IN 2022
KARNATAKA ARTS , COMMERCE & SCIENCE COLLEGE , BIDAR

PRE UNIVERSITY COLLEGE (PUC) - 2019 - 71.37%
SHRI CB GURUKULA RESIDENCIAL PU SCIENCE COLLEGE ,KARDYAL,BHALKI-BIDAR

MATRICULATION - 2017
SNS HIGH SCHOOL - 86.56%

SKILLS

- Web Technologies: [HTML, CSS, JAVA Script, react & Node.js]
- Tools & Software: [Git/GitHub, VS Code]
- Operating Systems: [Windows]
- Programming Languages: [Full stack Java]

LANGUAGES

- ENGLISH
- HINDI
- KANNADA
- TELUGU

INTERNSHIPS

CODTECH IT SOLUTIONS , HASTINAPURAM CENTRAL , HYDERABAD , 500079 , TELANGANA

During my 8-week Java Programming Internship at CodTech IT Solutions (Nov 30, 2024 to Jan 15, 2025), I gained practical experience in core and advanced Java concepts, including OOP principles, exception handling, collections, and multithreading. I worked on building console-based and mini-GUI applications, learned basic JDBC for database connectivity, and improved my skills in writing clean, efficient code. The internship also enhanced my understanding of real-time project workflows, debugging, and version control practices.

PROJECTS

GESTURE CONTROL LED HOME AUTOMATION SYSTEM - IOT

This project, “Gesture-Controlled LED Home Automation Using Arduino Uno,” uses a gesture sensor and Arduino to turn an LED ON or OFF with simple hand movements. It offers a touch-free, user-friendly, and hygienic way to control devices, useful for elderly or differently-abled users. The prototype shows the potential for future upgrades like IoT, voice control, and advanced gesture recognition.

HEART DISEASE DATA ANALYSIS

This project uses Python and machine learning to analyze heart disease data and predict risk. After cleaning the data and performing EDA, several models are trained, with Random Forest giving the best accuracy. The project shows how data science can support early heart disease detection and improve healthcare decisions.

ELECTRICITY THEFT DETECTION IN SMART GRID BASED ON MACHINE LEARNING

This project uses a CNN model to detect electricity theft by analyzing time- and frequency-based features. Data issues are fixed with interpolation and synthetic samples, and key features are selected using PCA and mRMR. With Bayesian tuning and the Adam optimizer, the model achieves strong results, including 91.8% accuracy and improved AUC over existing methods.
